

1. // The following code outputs 2 and 2 after waiting for one second

// Modify the code to output 0 and 1 after one second.

```
function randomFunc(){  
  for(var i = 0; i < 1; i++){  
    setTimeout(()=>{console.log(i),1000})  
    setTimeout(()=> console.log(i),1000);  
  }  
}  
  
randomFunc()
```

2.let abc123 = 'shivendra' //Reverse of String without using for loop

3. console.log(8 - '2'); //what is output

4. Why you're choosing Reactjs what is main advantage in ReactJs compare to Angular is it Best? Why

5. What Es6 Feature most using in your application.

6. what is "Let","Var" ? what is Differences.

7.What is DOM? How many types is available in DOM?

8.What is Closures main work ?

9. HTTP module are you working

10. How to communication between Child to Parent with using Functional component?

11. Fibonacci series in JavaScript 1 TO 100

12. "Let" and "Var" two keywords are same are different

13. ReactJs is unidirectional or Bi-directional? Why it is Unidirectional?

14.How to check an object is Empty using javascript?

15. what is block element and in-line element ?

16.How to check module are install or not inside you are application ? How to check versions?

17. what is Controlled and un controlled component ?

18. what are primitive data type are javascript?

19. what is different between "NULL" and "UNDEFINE"? let execute one example in your VS code?
